SIGNATUR BOX

notarity relies on Signatur-Box from A-Trust for efficient processes

notarity is a Viennese software company that is developing Europe's most modern platform for the online processing of notarial services. With these so-called "remote online notarizations", notarial procedures can be carried out flexibly, quickly and from any location in the future. notarity aims to offer its customers efficient and modern solutions through digitalization and the use of state-of-the-art technologies. The use of qualified electronic signatures is of course an important step in this process.

"When selecting a provider for the digital signature, it was important for us to find a trustworthy provider and renowned partner."
Jakobus Schuster
CEO & Co-Founder, notarity GmbH

Digitization in first place

„We at notarity have recognized that digitalization and the use of state-of-the-art technologies are crucial in order to be able to offer our customers efficient and modern solutions. Another important factor for digitalization is the need to keep pace with current developments and the competitive environment. The automation of processes, the use of digital signatures and the provision of online platforms enable our customers to speed up business processes and avoid time- consuming, paper-based procedures. By positioning ourselves as a pioneer in this area, we can set ourselves apart from other companies. "

Strong partnerships

„When choosing a provider for digital signatures, it was important for us to find a trustworthy and reputable partner. The fact that A-Trust already has many years of experience in this area and is used by numerous organizations in Austria strengthened our confidence in their services. A-Trust's Signatur-Box also offers a user- friendly and intuitive solution for quickly signing documents and easy to sign electronically. This simplifies the entire process considerably and saves valuable time for everyone involved. The implementation of the signature box was very pleasant with the help of the interface documentation and the test environment was a great help for the implementation. We were always helped very quickly with technical questions.

Clear conclusion

„Nowadays, the implementation of digital signatures is well supported by technology and can be seamlessly integrated into existing business processes. This enables companies to sign documents securely electronically without the need for physical signatures or the sending of paper documents. This not only saves time and costs, but also reduces paper consumption and the environmental footprint. In addition, the digital signature ensures a high level of security and authenticity, as it uniquely identifies the signatory and makes any changes to the document traceable after it has been signed. We can therefore unreservedly recommend this step to other companies considering the introduction of digital signatures"

A TRUST

Einfach sicher.
